1. Non-Profit Organization Statement

The Big Buddy Tutoring Program is a community-based initiative that connects high-achieving high school students with elementary school children who require additional academic and social support. By partnering with local libraries and recruiting volunteers from nearby secondary schools, the program fosters meaningful mentorship relationships that benefit both tutors and students. High school participants gain leadership experience and community service hours, while younger students receive personalized academic assistance and encouragement. Teachers may refer students who are struggling or considered at risk, ensuring that support reaches those most in need. The program promotes confidence, strengthens engagement in learning, and builds positive connections within the community.

---

2. Project Objectives

The primary objectives of this website project are:

- To clearly communicate the mission and purpose of the Big Buddy Tutoring Program
- To increase awareness within the local community
- To recruit high school volunteer tutors
- To provide an accessible and efficient student referral system
- To create a welcoming, youth-friendly, and trustworthy online presence
- To ensure the website is easy to navigate and responsive across devices

---

3. Project Description

This project involves the design and development of a fully responsive website for the Big Buddy Tutoring Program. The website consists of a Homepage, an About Us page, and a Get Involved section.

The Get Involved section includes two structured web forms:

- A Tutor Application Form
- A Student Referral Form

The website design incorporates a bright and welcoming colour palette of white, blue, green, and yellow to create a positive and supportive atmosphere. The site is built using modern HTML5 structure, CSS3 styling techniques, responsive design principles, and JavaScript functionality to enhance usability and interactivity.

Special attention was given to layout structure using Grid, Flexbox, float, and positioning techniques across different pages to demonstrate various design approaches. The site is fully responsive and optimized for desktop, tablet, and mobile viewing to ensure accessibility and user convenience.

---

4. Benefits to the Organization

The Big Buddy Tutoring Program would benefit significantly from this website by establishing a professional, accessible, and engaging online presence. The website centralizes essential information about the program's mission, structure, and community impact, making it easier for parents, teachers, and potential volunteers to understand its purpose and operations.

The integrated online application and referral forms streamline communication and reduce administrative workload by collecting information efficiently. A welcoming visual design builds credibility and trust within the community, while multimedia elements and testimonials demonstrate real impact. Overall, the website enhances visibility, strengthens outreach efforts, increases volunteer recruitment, and supports the program's ability to serve more students effectively.

---

5. Website Navigation Flow

Users begin on the Homepage, where the mission statement and key program highlights are prominently displayed. From the main navigation menu, users can access the About Us page to learn more about the program's goals, structure, and community impact.

The Get Involved section provides two clearly labeled options:

- Tutor Application

- Student Referral

Each form includes clear instructions and structured input fields to ensure ease of completion. All pages maintain consistent navigation, allowing users to return to the homepage at any time. The responsive layout ensures smooth navigation across desktop, tablet, and mobile devices.

---

6. Additional Technical Documentation

The website incorporates the following technical and design elements:

- Responsive design techniques for multiple screen sizes
- Structured layouts using CSS Grid, Flexbox, float, and positioning
- Multimedia elements to increase user engagement
- JavaScript form validation for improved user experience
- Accessibility considerations, including readable colour contrast and clear navigation structure
- Semantic HTML5 elements to improve structure and accessibility
